

Remanufactured Compressors

The value of a remanufactured compressor isn't what it costs you. It's what it saves you.

PERFORMANCE SPECIFICATIONS

Remanufactured Compressors

Looking for a truly cost-effective alternative to a new compressor? You've found one in Carrier remanufactured compressors. Because they're remanufactured – and not simply rebuilt – you get new-compressor performance and reliability in a unit that will save you money. And not just today, but for years to come.

Think a rebuilt compressor really saves money? Think again.

With their low price tag, rebuilt compressors are pretty tempting. But did you ever wonder why they're so inexpensive?

It's because most of them are put together by unqualified "backdoor" rebuilders who take shortcuts to save time and effort. Shortcuts that lead to premature component failure – and end up costing you thousands of dollars in downtime, lost productivity, and missed opportunities each year.

At Carrier, if it's not good as new, it's not good enough.

Every one of our remanufactured compressors is the product of over 30 years of Carrier engineering and manufacturing experience.

That means skilled technicians completely disassemble the compressor. Utilize advanced tooling to overhaul and upgrade it to the latest Carrier specs. And use sophisticated testing equipment to ensure the unit meets both performance and UL safety standards, making ours the only UL-approved Carrier remanufactured compressor on the market.

The result is a unit that's literally as good as new, ready to ship within 24 hours and backed by a two-year, new-compressor warranty.

So the next time you're tempted by a rebuilt unit, find real savings – and true value – in a Carrier remanufactured compressor, available only through your factory-authorized Carrier Transicold dealer.

Carrier Remanufacturing vs. Conventional Rebuilding

	Carrier	Most Rebuilders
Completely disassemble compressor to find root of problem	Yes	No
Take time to inspect and assess rest of compressor	Yes	No
Replace all critical wearing parts with brand-new, genuine Carrier Performance Parts™	Yes	No
Rebore, hone, or sleeve cylinder walls to original factory specs	Yes	No
Rewind or replace outdated or damaged rotors and stators	Yes	No
Completely overhaul and upgrade compressor to latest Carrier factory specs	Yes	No
Utilize sophisticated equipment to conduct thorough bore, electrical, leak, run-in, and performance testing	Yes	No
Pressure-test to UL safety standards	Yes	No
Chemically clean, degrease, and paint compressor to guard against corrosion	Yes	No
Perform random teardown analyses on completed compressors to ensure quality	Yes	No
Include two-year, new-compressor warranty	Yes	No
